TO WHOM IT MAY CONCERN

The decision was made at the beginning of March 1993 by the Vietnamese Ministry of Defense to trail a new product named Sun-Master/Insultec P.I.

We have since found that the use of Sun-Master/Insultec has helped to save many thousands of liters of petroleum stored in holding tanks, all year round, with special emphasis in summer.

The ministry of the National Defense has monitored (6) large petroleum storage tanks over the past 3 years and found that the product Sun-Master/Insultec has indeed reduced the losses of stored petroleum by evaporation by as much as 7% per week as claimed by the manufacturer. (Normally the losses have averaged about 10% per week now the losses are about 3% per week).

On the basis of these trails we have no hesitation in stating that the product has meet the standard claimed by the manufacturers.

The Ministry of Defense will continue using Sun-Master/Insultec P.I. on all such storage facilities over the coming years

Ha Noi, Vietnam, 30th November 1997
