The Manager,  
Insulating Technology Pty Ltd.  
30 Walker St., Windsor  
NSW 2756

9/09/2001

Dear Sir;

Some feedback on your insulation coatings that we have used since 1994.

We are pleased to report that your insulative coatings that we have applied to our galvanized iron roof and walls 6 and 7 years ago are still in very good condition and providing the same surprising level of insulation against heat as when they were applied.

This is surprising considering the intensive buildings offer an unusually high level of challenge to roofs and coatings. It seems that the insulating coating provides protection to itself as well as to the surface to which it is applied.

We have purchased the necessary slow stroke high-pressure spray applicator and had an operator trained so we can ensure standard application.

Some of the sandwich panel surface coatings are starting to break down on buildings that are 6 to 9 years old. Where we did test coatings with your product on the same panel 7 years ago, there is no degradation of the surface coating.

We will therefore be using your insulating coating in future to protect the surface of the panel.

In short, your insulative coatings are the most durable, efficient and cost effective of all the products we have tried.

Congratulations to yourself and your company. We feel very confident in recommending your product.

Ron Pollard. Manager
